3. This question involves analyzing and modifying a string. The following `Phrase` class maintains a phrase in an instance variable and has methods that access and make changes to the phrase. You will write two methods of the `Phrase` class.

```
public class Phrase
{
   private String currentPhrase;

   /** Constructs a new Phrase object. */
   public Phrase(String p)
   {  currentPhrase = p;  }

   /** Returns the index of the nth occurrence of str in the current phrase;
    *  returns -1 if the nth occurrence does not exist.
    *  Precondition: str.length() > 0 and n > 0
    *  Postcondition: the current phrase is not modified.
    */
   public int findNthOccurrence(String str, int n)
   {  /* implementation not shown */  }

   /** Modifies the current phrase by replacing the nth occurrence of str with repl.
    *  If the nth occurrence does not exist, the current phrase is unchanged.
    *  Precondition: str.length() > 0 and n > 0
    */
   public void replaceNthOccurrence(String str, int n, String repl)
   {  /* to be implemented in part (a) */  }

   /** Returns the index of the last occurrence of str in the current phrase;
    *  returns -1 if str is not found.
    *  Precondition: str.length() > 0
    *  Postcondition: the current phrase is not modified.
    */
   public int findLastOccurrence(String str)
   {  /* to be implemented in part (b) */  }

   /** Returns a string containing the current phrase. */
   public String toString()
   {  return currentPhrase;  }
}
```

Part (a) begins on page 12.

(a) Write the `Phrase` method `replaceNthOccurrence`, which will replace the `nth` occurrence of the string `str` with the string `repl`. If the `nth` occurrence does not exist, `currentPhrase` remains unchanged.

Several examples of the behavior of the method `replaceNthOccurrence` are shown below.

Code segments	Output produced

`Phrase phrase1 = new Phrase("A cat ate late.");`
`phrase1.replaceNthOccurrence("at", 1, "rane");`
`System.out.println(phrase1);`
	`A crane ate late.`

`Phrase phrase2 = new Phrase("A cat ate late.");`
`phrase2.replaceNthOccurrence("at", 6, "xx");`
`System.out.println(phrase2);`
	`A cat ate late.`

`Phrase phrase3 = new Phrase("A cat ate late.");`
`phrase3.replaceNthOccurrence("bat", 2, "xx");`
`System.out.println(phrase3);`
	`A cat ate late.`

`Phrase phrase4 = new Phrase("aaaa");`
`phrase4.replaceNthOccurrence("aa", 1, "xx");`
`System.out.println(phrase4);`
	`xxaa`

`Phrase phrase5 = new Phrase("aaaa");`
`phrase5.replaceNthOccurrence("aa", 2, "bbb");`
`System.out.println(phrase5);`
	`abbba`

Class information for this question

```
public class Phrase

private String currentPhrase
public Phrase(String p)
public int findNthOccurrence(String str, int n)
public void replaceNthOccurrence(String str, int n, String repl)
public int findLastOccurrence(String str)
public String toString()
```

The `Phrase` class includes the method `findNthOccurrence`, which returns the `nth` occurrence of a given string. You must use `findNthOccurrence` appropriately to receive full credit.

Complete method `replaceNthOccurrence` below.

```
/** Modifies the current phrase by replacing the nth occurrence of str with repl.
 *  If the nth occurrence does not exist, the current phrase is unchanged.
 *  Precondition: str.length() > 0 and n > 0
 */
public void replaceNthOccurrence(String str, int n, String repl)
```

Part (b) begins on page 14.

(b) Write the `Phrase` method `findLastOccurrence`. This method finds and returns the index of the last occurrence of a given string in `currentPhrase`. If the given string is not found, `-1` is returned. The following tables show several examples of the behavior of the method `findLastOccurrence`.

```
Phrase phrase1 = new Phrase("A cat ate late.");
```

Method call	Value returned
`phrase1.findLastOccurrence("at")`	`11`
`phrase1.findLastOccurrence("cat")`	`2`
`phrase1.findLastOccurrence("bat")`	`-1`

Class information for this question

```
public class Phrase

private String currentPhrase
public Phrase(String p)
public int findNthOccurrence(String str, int n)
public void replaceNthOccurrence(String str, int n, String repl)
public int findLastOccurrence(String str)
public String toString()
```

WRITE YOUR SOLUTION ON THE NEXT PAGE.

You must use `findNthOccurrence` appropriately to receive full credit.

Complete method `findLastOccurrence` below.

```
/** Returns the index of the last occurrence of str in the current phrase;
 *  returns -1 if str is not found.
 *  Precondition: str.length() > 0
 *  Postcondition: the current phrase is not modified.
 */
public int findLastOccurrence(String str)
```
